Primary Color	Secondary Color	Age:

Important Information:

Your pet received a radio-frequency identification (RFID) microchip today. The microchip was implanted between your pet's shoulder blades just under the skin. The microchip is approximately the size of a grain of rice. Your pet may feel a little tender today near the implantation site and spotting of blood is normal. If the area bleeds excessively, becomes swollen or feels hot, contact your veterinarian as those may be symptoms of an infection.

An animal's microchip simply contains a 15 digit number and does not act as a GPS tracking device. The number will be registered in PetLinks international database within 24 hours by our staff with the information you provided today.

If you wish to add alternate contact information or change information (such as your phone number, address) visit the petlink website: <http://www.petlink.net> and click "Register my pet". Then choose "I have a microchip number". You will then enter the fifteen digit number of the microchip found on this form. From this point you will be able to set up your e-mail address / username and password and add or update any of your pet's information.

Should you have any additional questions, please call our office at 706.312.7916 and *thank you* for having your pet microchipped. *Also, please remember to make sure your pet's rabies vaccination is current (Done at least once a year) and please consider spaying or neutering your pet if not already.*

Your pet's microchip number is:
